

PRESCHOOL EDUCATION IS THE FOUNDATION OF A CHILD'S DEVELOPMENT

Radjapova Gulbahor Mamatraimovna
Termez State Pedagogical Institute,
Teacher of the Preschool Education Department

Abstract

Caring about the future generation, striving to bring up a healthy, well-rounded generation, strengthening our national values passed down from time to time, from generation to generation. Also, to inculcate the ideas of Humanity-oriented education. It is stated that every parent struggles throughout his life to see the happiness and perfection of his child, and that children who grow up in such a family value national traditions, values, and customs.

Keywords: Innovative processes, economy of knowledge, professional innovative activity, humanity, traditions, feelings.

Introduction

Caring about the future generation, striving to raise a healthy, well-rounded generation are our national values that have been passed down from time to time, from generation to generation. Every parent struggle, works, and strives throughout his life to see the happiness and perfection of his child. Children growing up in such a family value national traditions, values, and customs.

Today, all of us are entrusted with the responsible task of forming the young generation into a deep-level perfect person.

All mental processes, including thinking, memory, perception, etc., are rapidly developing in children of preschool age. The child actively develops by actively participating in everyday life, communicating with adults and peers. His speech is shaped by his ideas about the world around him. Many images of objects and events perceived by the child, as well as thoughts, feelings and actions associated with these images, do not disappear without a trace. They remain in the mind and are restored under certain conditions in life activities.

The peculiarity of child-oriented education is that the child is formed in accordance with his capabilities, potential, and characteristics of his nature, not according to someone's wishes and orders. The content and methods of education are organized in an environment where the processes of forming the child's personality and recognizing him as an independent person take place. If this process is focused on the individual and universality is characteristic of it, this pedagogical activity goes to the level of human-personality.

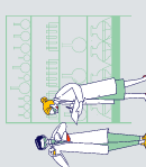

The ideas of humanistic education are reflected in the following:

- modern education originates from universal human values and is based on the spirituality of a particular society;
- the goal of education is focused on the formation and development of a person with an identity and universal values;
- the perfection of the person is carried out in the form of a complete unity of consciousness and feelings, soul and body;
- all human rights are protected, including the right to choose the content of education;
- in the organization, group work is carried out together with separate individual work, and special attention is paid to the formation of a unique style of the child's activity; education as a type of personal activity has an internal basis, it relies on equal relations between the teacher and the student, cooperative decision-making;
- the best education is based not on formal management, but on love, attention, and cooperation.

It is on this education that the city YTT Radjabova Gulbahor Mamatraimovna, under the leadership of the city of Termiz, works on the basis of the Improved "First Step" program in the ONMTT #6.

Knowledge monitoring is held with children three times a year. Based on the results of the monitoring, children's knowledge gaps are identified, therefore, our educators and pedagogues work with children separately. They take our talented children to the events and competitions held in the district and region and return with success.

Interesting events are also held in our preschool education organization throughout the year. Music, like any art, helps children learn about the world and educates children, and it educates not only their artistic taste and creative imagination, but also love for life, people, nature, love for their homeland, interest and feelings.

It should be said that the work carried out with the parents of the children shows its results in the progress being made. Because in the process of education, it is necessary to have a continuous relationship between the family and the organization. From family to organization, from organization to family, etc. It is known that children of this age depend more on the family. The family is responsible for their socialization (socialization), that is, their integration into society, which is mostly done through the preschool education organization. Therefore, no matter how important the organization of preschool education is, for children of this age, the family is in the first place in the matter of education.

Family is the main base of education, the hearth. It is necessary for the family to be aware of the environment in the preschool educational organization, and the family in the preschool educational organization. Then the upbringing of the child will be effective. It is often necessary to hear from parents that "preschool education organization should be like this", and from employees of preschool education organization, "parents should be like this". Preschool education organization and family are not a place to express mutual complaints, to hide and blame each other. Such a confrontation between the family and the preschool education organization does not lead to good, both sides lose. But it is the children who suffer the most. Therefore, it is necessary to never forget that the family and the preschool educational organization are mutual partners in the upbringing of the child. It should always be remembered that it is important to feel mutual obligation and responsibility.

In conclusion, we can say that the role of our preschool education organization is invaluable in helping our children to take their place in the future, to react to the events that happen around them, to become a perfect generation, owners of our Motherland tomorrow. We are sure that our boys and girls who are educated in these organizations will definitely grow up to be brave, brave and intelligent people who will serve the country in the future.
