Abstract

The article will talk about independent education and its organization. Internet services that can be applied in the process of independent education are provided.

Keywords: credit, Independent Education, Education, Internet Services, forum.

Introduction

There are currently significant changes in the education system. Changes in the educational process are also entering our educational system. A new look and approach to the educational system was formed in Uzbekistan. The world experience was explored and new forms and manifestations of Education entered.

The credit-module system, which is supported in many countries of the world, has entered our educational system. Now we have switched from teacher-oriented education to a new stage, that is, the appearance of student-oriented education.

The main feature of the credit – module system, education is aimed at the student. In the old educational system, the student was only, having listened to the lecture and the main work was performed by the teacher, and now the main emphasis is on the student's work on himself.

For example, in the previous education system, the student was asked questions only from the topic mentioned in the exam, and he was prepared for the exam with a narrow range of information. This led to the fact that fakat memorized the information that the teacher gave him, it was not necessary to master additional information. In the credit-module system, on the contrary, the student will also have to prepare for additional given subjects, which will increase his interest in independent study and education. The student's ability to think develops.

In the credit – module system, it is necessary for the student to work independently and accumulate loans. In doing so, the teacher creates conditions for the student to work more independently.

The issue of special attention to the Independent Education of students in educational institutions, the development of Independent Thought and creative thinking in educational institutions is one of the urgent tasks of Education. The Independent Education of students is their desire to expand, deepen their knowledge, improve existing skills and skills, and master new ones.

Independent education of students is understood as independent work on topics allocated for independent learning, provided with educational, methodological literature and recommendations, controlled in the form of tests, colloquia, abstracts, control work. The full size of Independent Education of students must be confirmed by assignments that require the student to work independently every day. Independent hours of education in the teacher's chair of students include consultations on the most complex issues of the curriculum, homework, lectures and other independent educational assignments. The content of Independent

Education of students is, of course, reflected in the working program (syllabus) and the science program. Independent education of students is a way for a student to actively, purposefully acquire new knowledge and skills without the direct participation of teachers.

Taking into account the increasingly widespread use of ICT and digital technologies in the higher education system, special attention should also be paid to the tasks of Independent Education in electronic form when performing independent education.

In the credit – module system, independent education is the main form of Education. Independent education we divide into two types:

1. Independent education that the student can do himself.
2. Independent education that the teacher can do under his guidance.

Both of these types of independent education are carried out on the basis of the student's cooperation with the teacher. But, it is necessary to take into account that independent education means that the student himself conducts activities independently, in which the teacher acts only as an advisor, that is, gives the student instructions for independent work that must be carried out during Independent Education.

When a student is tasked with obtaining an independent education, an important role is played by the teacher in setting a clear goal for him, proposing an algorithm of the upcoming work, recommending literature, determining the form and organization of the upcoming work, deadlines and assessment criteria. In audience classes, students receive a certain level of knowledge, but in order to consolidate the knowledge gained, it is advisable to engage in independent work. The main leading idea is to pay great attention to the independent activities of students in obtaining knowledge from the traditional teaching method. [1]

It is necessary to take into account that independent education it is not only about leaving the student alone, but also about giving him the necessary advice on a regular basis.

The main aspect of Independent Education is the finding of Information, their extraction of the necessary and application in practice. The main assistant for this is modern information technology.

In the effective organization of the independent educational process, we can use their Internet services. In the first place are the internet's information services. In addition, there are also services for communication with the teacher.

At this point, let's look at the benefits of internet services for Independent Education:

1. Convenience in search and communication, that is, it is very easy to find a video, audio, photo, a person or a person in social networks. In addition, communication services are very cheap.
2. Relief in finding and sharing information, information on a topic can be easily found on chunonchi social networks. Social networks, especially messengers, have given a lot of convenience in the exchange of information. They dramatically facilitated the transmission of information of various forms.
3. One of the most complimentary, significant aspects of social networks regarding the means of self - development of an individual is the incomparable help in obtaining science, vocational training. Even in the most relevant, in-demand areas of Science today, such as modern

mathematics, programming, fundamentals of economics, psychology, foreign languages, video lessons, guides can be found as desired.

4. There is an opportunity to use various homogeneous internet resources, apply to virtual museums and online libraries.

In independent education, feedback between the student and the teacher is considered important. Using Internet services will help make this process much easier. That is, with the help of the services created for communication of the internet, it is possible to quickly communicate with the teacher. To do this, we can use various messdgers, emails, chats.

Another of the Internet services is the forums. With the help of forums, students will be able to get answers to the questions they need. The forums will be structured primarily on multiple-choice questions, and here all participants will have the opportunity to answer the questions.

The use of Internet services in the process of independent education helps to develop such abilities of the student as traceability, independent thinking.
