### Abstract

This article discusses the problems of the relationship of young people to the Internet, social networks and various entertainment applications and ways to overcome them. The process of creating a Google account for a child and setting up the Google Family link system. Monitoring children using the Google family link system. Family link functions and usage tips.

**Keywords:** cyberspace, family link, social network, application, control, child, information.

### Introduction

It only takes a few seconds for us to get enough information about the news and events that happened today in a certain part of the world. In front of the monitor, you can get any information on any topic. That's great, but with so much information nowadays, we have to check the reliability of the information coming to us. Nowadays, along with positive information, there are also many negative information and games being distributed on the Internet. Various games, online gambling, paranographic sites and social networks spread information that has a negative impact on the minds of young people on the Internet and social networks. It has been determined that young people get too much information from the Internet and social networks and spend time on social networks, which has a negative impact on their mental development, memory loss and social relationships.

The pursuit of information and communication technologies on a global scale has opened the door of great opportunities for independent, productive and rational users of technology in the context of globalization. In the early days of the Internet, special attention was paid to eliminating technological interruptions. Over time, "World Wide Web" has created unprecedented conveniences that include information and entertainment programs of various contents based on human needs and interests. This, in turn, led to the widespread popularity of the Internet. Along with this, attacks aimed at having a negative impact on human consciousness and attempts to derail the country's information management system have also increased. Cyberspace has acquired the status of a favorable environment for the implementation of positive and negative processes. Telephone conversations, "chats", various online discussions, computer communication in general have developed in cyberspace.

### Problem Statement

Today, there are so many sources of information and information in the world that we have to check and analyze whether the information coming to us is correct and complete, whether this information is distributed by reliable or unreliable sources. Today, the Internet and social networks have become a source of information. Not all the information spread on the Internet

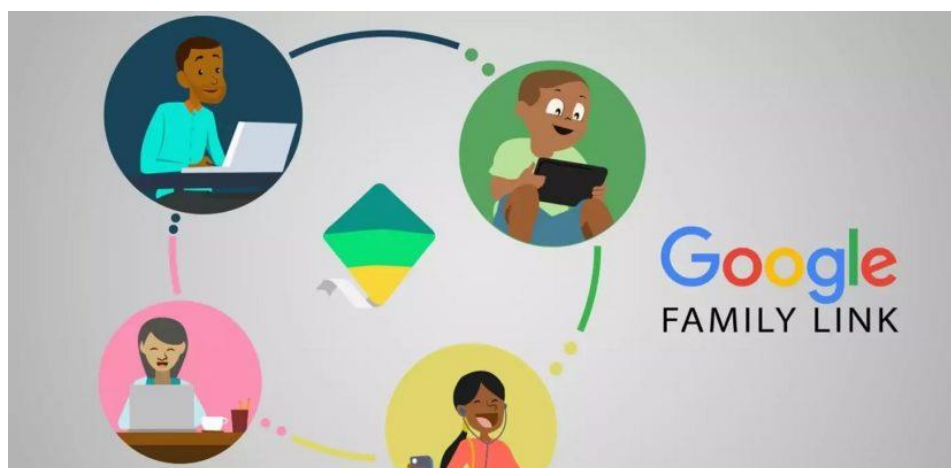

and social networks is useful for us and our children. To date, several models of protecting external information from the influence of young people have been developed worldwide. In this direction, foreign scientists Gianluca Quaglio, Sophie Millar[1] and others have been covering widely in their scientific research and pedagogical work.

Social networks have become the main part of the Internet for many people today. That is, many users access the Internet today mainly to spend time on social networks: they receive news, videos and other entertainment information from these networks; he talks to his friends, chats, etc. Examples of mass social networks include sites such as Facebook, Twitter, Telegram, Instagram, Odnoklassniki, Vkontakte. The biggest threat to Internet users' privacy may now come from these networks. Because you may have entered most of your personal information, photos, and even credit card and bank information on these sites. Therefore, social networks should be used carefully so that this information does not give a warning.

Children are exposed to malicious people while using the Internet. Communication with an unknown person on the Internet makes it possible to establish a trusting and friendly relationship. The criminal uses this advantage to attract inexperienced young people. Parents can protect their children from online dangers by monitoring how they use the network[2].

**Problem solving.** Nowadays, parental control is very important in modern devices, through such systems it is possible to control children from various negative information and their gadgets. The Google company, famous for the development of modern technologies in the world, offers a number of technologies. One of these is Google's world-famous **Family Link** system.

1-fig. Google's familylink service.

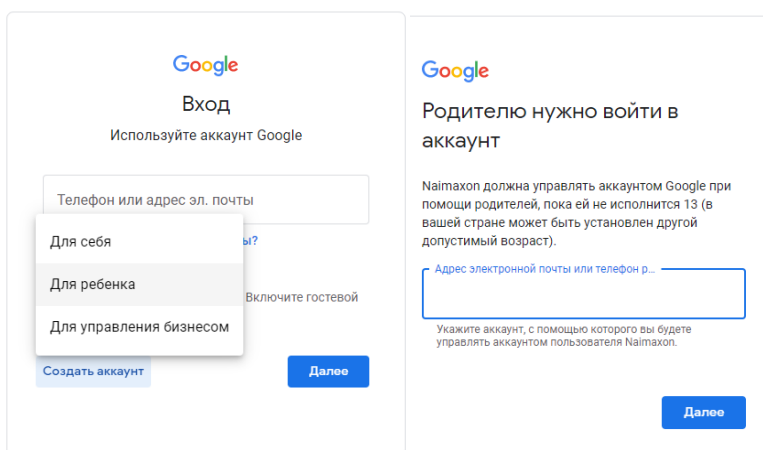

The Google Family Link application allows you to set rules for your child's use of various sites on the Internet. You can share Google services with your child and 4 other family members in your Google family group. You can add more parents to your group later to help control your child's account. Parents can do the following through Family Link[3,4]:

- set usage time on child Android or ChromeOS device;
- determining the location of the child's active and logged-in Android device;
- approve purchases and downloads made by the child from Google Play Market or Stadia and limit the display of content intended for adults;

- help the child choose the type of activities saved to the Google account (services are adapted based on them);
- setting google Safe search parameters;
- checking access permissions for the microphone, camera and contacts on the child's Android or ChromeOS device;
- Change content, permissions and other settings for YouTube and YouTube Kids (where available).

Family Link parental controls help you monitor and manage activity on your child's device. However, there are certain limitations, to overcome them you need to install the Family Link app on your Android or iOS device.

2-fig. Create a google account for children

We can install the Family Link mobile program on our phone through Google Play or Play Market [5].

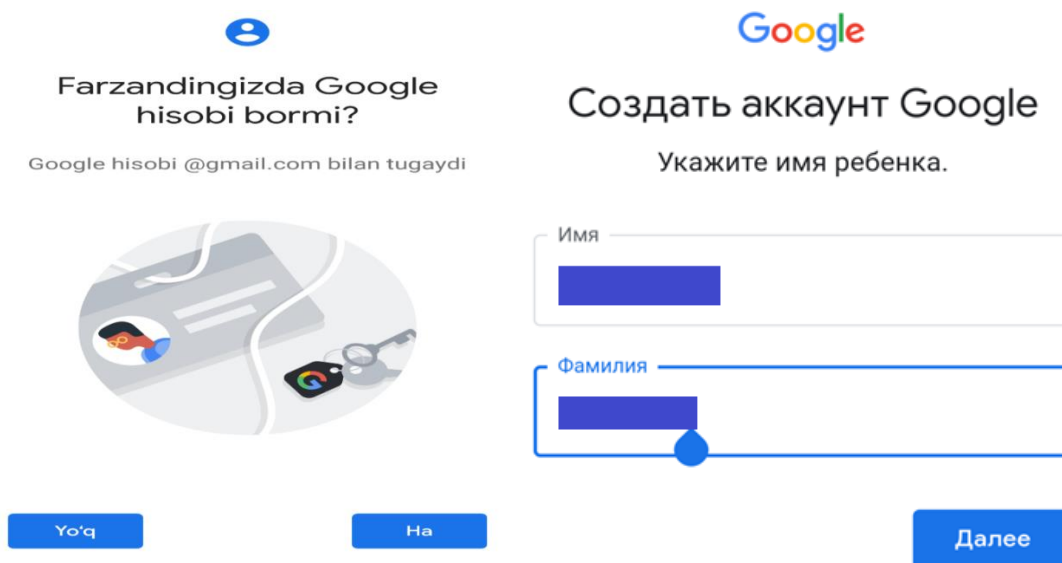

3-fig. Setting up Family link and confirming the family manager

If you've created a Google Account for your child, you can sign in and view, update, remove, export, or restrict the processing of their information. If you've forgotten your child's account

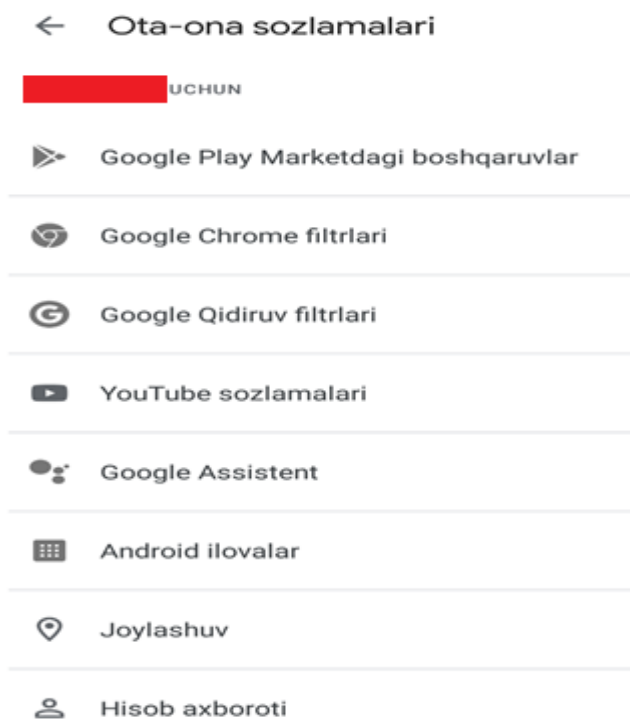

password, you can reset it through the Family Link app or Family Link web version settings. After signing in, you can use the various controls described in Google's privacy policy (such as settings for tracking activity on Google services) to manage the privacy settings and personal information in your child's account.

4-fig. Confirm that your child has a google account and create a google account

One of the most important functions of the Google Family Link system is that it is always possible to determine where the device is located. We can always see the location of the children to know where they are. Parents can also see the permissions of installed apps. In this way, you will be able to set the time for children to use different applications or restrict the application altogether.[3-5].

5-fig. Set up your child's device management settings

## Conclusion

Nowadays, our life cannot be imagined without the Internet and social networks. Facebook, Instagram, Telegram, YouTube and Messengers have become part of our lives. Of course, we should use them wisely. Currently, Google Family link is the most popular system for protecting the young generation from negative information, controlling their Internet usage, restricting the use of various applications, prohibiting them from receiving information that is not suitable for their age, and organizing all similar processes in cyberspace.
