Abstract

This article describes the role and importance of innovative approaches in teaching science to elementary school students, achieving efficiency in education and training based on an innovative approach.

Keywords: Democratic society, educational sphere, personality formation, purpose of education, modern society, revolutionary changes, educational process.

Introduction

Innovation is a unique type of thinking, which includes common problems with their own solutions and implements them in pedagogical practice. Innovative pedagogy is the dominant theory, based on theory and solving practical problems. The goal of innovation is to achieve the highest result from the spent funds or efforts. Education is the process of imparting knowledge, skills and abilities, the main means of preparing a person for life and work. In the process of education, information is obtained and education is carried out. As the teacher organizes his innovative activity, the stages of its formation can be defined as follows:

The first stage - ready methodological recommendations are clearly copied.

The second stage - to introduce some new devices and methods into the existing system.

The third stage - the full development of the content, implementation methods and form of the new idea.

The fourth stage - the development of the teacher's own concept and methodology of education and training.

When preparing teachers for innovative activities, it is necessary to take into account the psychological climate in the team, the level of awareness of the news of the world education market of the team members. The humanitarian school of pedagogy requires the student to adapt and provide him with favorable conditions and technological protection. The humanitarian school has developed unique forms and methods of practical innovation. Below are some of them:

distinguish between educational and educational activities;

coordination of educational processes according to different characteristics of the person;

creating the necessary conditions for the development of abilities and interests of each pupil;

ease of educational and educational activities;

psychological protection;

confidence in the student and his strong capabilities;
accept the student as he is;
ensuring the success of educational work;
mastering the target direction of the school;
justifying the level of development of each student;
the absence of a spiritual relationship between part-time education (external) and the student and
the termination of cause-and-effect relationships;
the teacher's personal inner orientation and direction;
strengthening humanitarian education;

Innovation is related to the search for solutions to pedagogical problems, the analysis of the progress, characteristics, content, content and classification of innovative processes in the field of education.

Innovations in education help to achieve various goals, such as humanizing, democratizing the educational process, activating the cognitive activity of students, increasing the effectiveness of the organization of educational and educational work, changing the educational material from the point of view of methodology and didactic

And we should also say that by introducing informational multimedia educational technologies into primary education, the content of the subjects will be completely and perfectly assimilated into the minds of students, it is important to introduce innovative tools. In addition, the effective use of multimedia tools in primary education has its own advantages. They should also be represented by the following.

- Visualization occupies one of the most important places in education.
- Encourages the student to search.
- The student sees and hears the educational process at the same time.
- Activates the student's thinking.
- Creates a positive motive for student activity.
- There will be an opportunity to conduct classes in a lively and communicative manner.

The innovative directions used in the course of the lesson will help to educate the students in a very beautiful way, as we mentioned above, and make the course of the lesson interesting and meaningful.

Education is of decisive importance in the life of any society and any country. Education is a practical pedagogical process aimed at forming certain physical, mental, moral and spiritual qualities in a person. The formation of a mature, free-thinking person is the most important goal of education in a modern democratic society. Personal education is a continuous process that continues until the end of life. During this process, the negative or positive impact of events in the environment on a person determines the extent to which his human qualities are formed. One of the most urgent problems facing the education sector today is aimed at this very goal, which is to ensure the formation of the future generation as a well-rounded person. The activity of the teacher is aimed at forming a growing personality. All-round development of a person is carried out under the condition that education fully reflects the requirements of society that determine the purpose of education. Education plays an important role in human development. A certain ideal is expressed in the goals of education, the demands placed on a person are formed - how he should be and what social needs he should be prepared for. Education is divided into general and

individual goals. Common goals represent qualities that should be formed in all people in society. Individual goals mean educating a specific person.

There are different goals of education in the history of pedagogy. Forming a mature, free-thinking person is the goal of education in a democratic society. The development of modern society is characterized by rapid improvement of machine production and increasing its technical level. Education is a purposeful process of personality formation. This is a specially organized controlled and managed interaction of the teacher and students, its ultimate goal is the formation of a necessary and useful person for society (I.P. Podlasy). The great thinkers of the East believed that the moral perfection of a person, the formation of his spiritual image in all aspects, is one of the important factors of the development of society. Education is a set of behaviors, manners, and manners that are manifested in people's relationships with each other, family, and society.

The educational process has a number of characteristics: purposefulness, interaction, multifactoriality, continuity, emergence, continuity, complexity, duality, uncertainty of results, temporality. The appropriateness of education means that the educational process has a goal, that is, a system of tasks solved by education.

The revolutionary changes taking place in society cannot be implemented without changing the person himself. However, educating new people does not happen by itself, but in the process of renewing social relations. In the developed countries of the world, the problem of raising a person who is developed in all aspects is the most important requirement of today. We can learn that education is one of the most important factors in human life from the following speeches of the President of the Republic of Uzbekistan Shavkat Miromonovich Mirziyoyev: "Another important issue that always comes to our mind is the manners, behavior of our youth, in a word, it is related to worldview. Today, times are changing rapidly. Young people are the ones who feel these changes the most. Let the youth be in harmony with the demands of their time. But at the same time, he should not forget his identity. Let the call of who we are and the descendants of great people always resonate in their hearts and encourage them to stay true to themselves. At what expense will we achieve this? Due to education, education and only education".

The analysis of the teacher's innovative activity requires the use of certain standards that determine the effectiveness of innovation. Such standards include novelty, acceptability, high efficiency, possibilities of creative application of innovation in public experiments. In the current period, there is a great need to further develop the National idea in the development of innovative education in our country. In the age of advanced technology, it is necessary to inculcate our national idea in the minds of our youth in an innovative way. In this case, innovative and technological improvement of the National idea is necessary from a practical and theoretical point of view.

Currently, in every family together with the neighborhood communities, conversations about education, and in kindergartens, more activities related to the education process, examination contests, increasing the number of hours of education dedicated to education in schools, colleges, universities, institutes, even the creation of textbooks on education is under way.

In short, education is important for the development and growth of every country and homeland. One of the important tasks of today is to organize the education and training process using innovative approaches, to increase the effectiveness of education, to analyze and put it into practice.
