## Abstract

We need to recognize that the family is the center of education that ensures the eternity of life, the continuity of generations, preserves our sacred traditions, and at the same time, has a direct impact on how future generations will become human beings. A child lives in a family environment from the day of birth.

**Keywords:** adolescents, emerging crime, alcoholism, drug addiction, suicide, interpersonal relationships in the family, child psychology of parents, psychological and pedagogical laws.

## Introduction

We need to recognize that the family is the center of education that ensures the eternity of life, the continuity of generations, preserves our sacred traditions, and at the same time, has a direct impact on how future generations will become human beings. A child lives in a family environment from the day of birth. Family traditions, values, and customs form a child's personality. The most important thing is that children understand and feel the demands of society through the school of family life, said the first President of the Republic of Uzbekistan, I.A. Karimov. In fact, the correct establishment of relations between parents and children in the family has a great influence on the creation of a healthy environment in oriental family relations, on the correct conduct of children's education, on the formation of positive qualities and individual national psychological characteristics in children. The evils of our society and nation, such as crime, alcoholism, drug addiction, and suicide among teenagers today, are precisely the fact that interpersonal relations in the family are not properly established, parents do not correctly interpret the psychology of children, their national relations, requires revealing the psychological and pedagogical laws of the specific aspects of the relationship between parents and children. Judging by the observations, the main causes of crimes committed among children and adolescents and family separations are manifested on the basis of disputes related to the relationship between spouses. This has a negative impact on the upbringing of children and their formation as a person. Getting the right relationship with children in the family is very important, and the sphere of influence is as wide as the social circle. The family has great opportunities to educate children based on national values in the spirit of love for the motherland, a conscious attitude to work and national wealth, and intolerance to defects. In the family, it is important that adults, especially adults, have the right relationship with children aged 12-15. After all, as any child grows up, he dislikes the orders and instructions of adults. These commands and instructions often lead to resistance, even refusal to comply with

reasonable demands. In such situations, it is desirable to change the way of treating the child in order to be able to correctly convey the existence of specific educational aspects of the Uzbek people. Persuasion should be used instead of command, so that the child consciously understands that he must do the activity that needs to be done. So only if the child is has one work conscious way to perform get used to it . If big age advice to the child if it's done , it's his to his anger touch can In these cases of the child to the heart enter pedagogical , psychological methods apply good effect gives Vital observations that's it shows that sometimes some in families to the child something activity perform or good reading for him or this take that I will give big promises is given Parents this with their children tamagir as that he is putting never too they don't understand . That thing to emphasize should be , children with communication to the relationship at the entrance their to psychology attention not to give , in the family unhealthy psychological environment - each other insult , threat and oppression transfer based on clothed relationship in children cowardice , nervousness , deceit , unkindness , rudeness like of adjectives formation take will come Parents and children between attitude positive color take for children of parents with to communicate when entering to the national pedagogical etiquette compliance to do needed Parents said each one the word effect who does part of the word to say form of this word to the shape suitable coming without face open or sad pedagogical influence effectiveness increases . On the contrary , to psychological and pedagogical manners compliance don't do it , kid too much except more than to love or cruelty , harshness with in relation to be between parents and children mutually treatment attitude aggravation or to the violation reason will be Parents and children between treatment of relations positivity in providing each one of the child psychological features special treatment and in relation to be necessary In this case, the child age , mental processes , individual-psychological characteristics , mental states in the family national educational of the environment psychological laws account taken necessary Your child age is known in the situation situation better to understand for ourselves of the child instead of put let's see need Then we child's mental world , desire realize eat we can The child's mental world , excitement and joys , thoughts in ourselves expressing let's see while the children being the main criterion in understanding service to do it is necessary Parents and children between positive treatment relationships surface to bring a lot in terms of of parents own their children character , character traits , 324 interests such as let them know depends . In this respect both one parents first of all , own their children individual-psychological characteristics (temperament, character, interest ) desires , emotional cases they know and that's it basically treatment in relation to be it is necessary . Yu is in the snow given to thoughts according to the child behavior and outlook in formation in the family decision found healthy environment first of all , family of members mutually relations , cooperation , family national values to honor is connected . Such circumstances right interpretation reach each one of parents or family of members ethnopsychological literacy level too It depends on education circle knowledge to give with together children education special procedures in practice application reach parents to the activity depends is a person as forming of children mature to find opportunities by creating gives
