

# PRIMARY EDUCATION AND SOCIAL ISSUES IN SOCIETY: HOW THE FUTURE OF CHILDREN NEEDED EDUCATION

Sarvinoz Tursunova

Teacher of Chirchik State Pedagogical University

Nigina Muhammadova

Student of the Chirchik State Pedagogical University

## Abstract

Elementary education is one of the most important stages in a child's life. During this period, a fundamental approach to children's learning is formed, and a foundation is laid for them to become active and responsible members of society in the future. In this regard, primary education has a direct impact on the overall development of society, the solution of social problems, and in particular, on the future successful life of children.

**Keywords:** Problem, solution, future, primary education, social murder, economic murder, creativity.

## BOSHLANG'ICH TA'LIM VA JAMIYATDAGI IJTIMOY MUAMMOLAR: BOLALARNING KELAJAGI QANDAY TA'LIMGGA MUHTOJ

## Annotatsiya:

Boshlang'ich ta'lim – bolalar hayotida eng muhim bosqichlardan biridir. Bu davrda bolaning bilim olishga bo'lgan asosiy yondashuvi shakllanadi va ular kelajakda jamiyatning faol va mas'uliyatli a'zolari bo'lishi uchun poydevor qo'yiladi. Shu boisdan, boshlang'ich ta'lim jamiyatning umumiy rivojlanishiga, ijtimoiy muammolarni hal qilishga, va ayniqsa, bolalarning kelajakda muvaffaqiyatli hayot kechirishlariga bevosita ta'sir ko'rsatadi.

**Kalit so'zlar:** muammo, yechim, kelajak, boshlang'ich ta'lim, ijtimoiy qatlam, iqtisodiy qatlam, kreativlik.

## Introduction

Although Uzbekistan's primary education system has undergone changes, many aspects of it still require improvement. Some of the problems include the following: insufficient use of innovative technologies, the use of information and communication technologies (ICT) in

elementary education, the lack of a sufficient level of training in schools, and the lack of a sufficient level of training in elementary education, the lack of a sufficient level of training in elementary education, the absence of a sufficient level of training in elementary education, the absence of a sufficient level of training in elementary education, and the There are significant differences in the quality of education in different regions of Uzbekistan, while the quality of education in small and remote areas is somewhat low, which negatively affects the development of the general education system.

Elementary education plays an important role in the development of society. At this stage, a person's worldview, striving for knowledge, personal development, and a sense of responsibility towards society are formed. In order for the primary education system to be effective, it is necessary to consider a number of factors. The primary education system is considered the most important stage in the scientific and personal development of children in society. However, there are a number of problems in this area, which can reduce the quality of education, limit the opportunities of children, and create social inequalities in society. Below we will consider the main problems in primary education.

### 1. Social problems and primary education

Several social problems in society affect the primary education system. Let's look at some of them:

- **Educational inequality:** Access to education is uneven across society. In some areas, the quality of education is low, resources are scarce, and teachers are underqualified. This is especially true for children living in rural areas or in poor areas. Improving educational opportunities for them and creating equal opportunities for them to learn is crucial.
- **Socioeconomic differences:** Poverty, parental education, and racial and ethnic differences affect children's education. For example, children from families with limited financial resources face greater difficulties in realizing their dreams and aspirations. To solve these social problems, the education system must help children discover their potential and support their intellectual and personal development.
- **Health and mental health issues:** Another issue that directly affects primary education is the health and mental health of children. Stress, trauma, and family problems can reduce children's interest in learning. Therefore, improving children's mental health and creating a healthy environment in primary education is very important. Teachers and educational institutions should address the psychological health of children.
- **Insufficient teacher qualifications:** The qualifications and experience of primary school teachers directly affect the quality of education. In many regions, teachers are not sufficiently qualified, which slows down the learning process of students. It is important to regularly improve the qualifications of teachers, introduce new pedagogical methods, and prepare them for modern teaching methods.
- **Parental and community involvement:** The role of parents and the community in early childhood education is very important. However, in some regions, parents do not pay enough attention to the educational process or their interest in education is low. It is necessary to

strengthen cooperation between parents and educational institutions, and to involve parents in the education and development of their children.

## 2. Kelajakdagi ta'lim ehtiyojlari

The current social problems in society are one of the main factors in determining what kind of education children need in the future. In connection with modern forms of education, new technologies and changing social needs, it is necessary to take into account the following aspects when determining what kind of educational model is needed for children in the future:

### a. Quality education and inclusion

Children have different learning needs. Each child has their own individual characteristics, interests and pace of development. Therefore, the education system should be inclusive. This means that education should create equal opportunities for every child, expanding learning opportunities, taking into account their specific needs. For teachers, it is very important to ensure an individual approach and equality between social groups.

### b. Digital literacy

In the modern world, technologies are penetrating all aspects of life. In primary education, it is necessary to teach children digital literacy, prepare them for learning in areas such as computer technology, the Internet, and programming. This not only helps to achieve scientific achievements, but also prepares children to be successful in a globally competitive society.

### c. Developing creation and creativity

In the future, it will be important for children to develop not only traditional knowledge, but also creativity and creative thinking. Changes in the world economy and society require new approaches, which require the development of children's creative thinking, problem-solving skills and innovative approaches. For this reason, in primary education, children should be taught not only knowledge, but also the ability to create and innovate.

### d. Promoting a healthy lifestyle

Teaching children a healthy lifestyle in primary education, encouraging them to engage in physical activity and sports, and maintaining their psychological and physical health are of great importance. This is especially important in modern society, given the stress and adverse environment that children are exposed to.

## 3. Conclusion

Primary education is not only a process of learning, but also an important stage of social, psychological and personal development for children. Social problems in today's society shape the educational needs of children. These needs include not only quality education, but also social equality, healthy development and creative thinking. The primary education system plays an important role in preparing children for a successful future and in solving social problems in society. Therefore, it is necessary to introduce new and modern approaches to the

education system. Problems in primary education can become an obstacle to the effective functioning of the education system. Their solution requires reforming the education system, improving the skills of teachers, providing resources, and strengthening the trust in education in society. A good education system is the foundation for the future of children and makes a significant contribution to the development of society. It is very important to shape primary school students' initial ideas about professions, as this process helps children choose the right profession in the future and identify a field that suits their interests.
