Abstract

This article tooth surgeons for current happened ethics and deontology to the topics dedicated. Today on the day tooth surgeons needs clinical experience and Medicine of the field development with closely related was new goals puts in the article this of issues in medicine place and importance illuminated.

Keywords: Deontology, ethics, dentistry surgeon's moral problems, in medicine deontology.

Introduction

Uzbekistan In the Republic deontology development medical and bioethics formation with This is primarily due to our country's human to the rights was attention with explained.

This is the direction Presidential Decree No. VII -6221 of May 5, 2021 - "On Health storage system consistent reform to do continue Education, Medicine of employees potential increase for necessary conditions create "about" document based on done is being increased.

Medicine ethics is Medicine of employees net behavior and moral of standards is a complex. Society development with together, conscience, compassion, friendship, humanity, self-catch to know such as values learn started.

The term " deontology " first times English philosopher Bentham by 17th century at the beginning included is , it is "a person's profession" behavior about "teaching" means.

Deontology word ancient From the Greek words " deon " (duty) and "logos" (teaching) come He is a medical doctor . of employees own professional duty right to perform , to the patient relatively human and moral in a relationship to be in mind holds .

Medical deontology own The roots of the Eastern Renaissance period (VII-XII centuries) scholars For example : Ar -Ruhawi , Ar-Razi , Ibn Sina. In the 9th century , Al- Ruhawi by written "Adab al- tabib " (The Physician) (ethics) work doctor ethics to the system basis Later he studied Medicine . of science spiritual-enlightenment to the foundation has become Great The scholar Abu Ali ibn Sina in his work " The Canons of Medicine " doctor ethics principles entered , they centuries during doctors spiritual upbringing basis become service did .

Medicine ethics history doctors professional duties and patient health protection in doing moral obligations with related is a thousand years old to history has .

Results and Discussion

Medical deontology wide in the sense - this doctor's behavior about It is a teaching . He is a patient . and doctor between mutual relationship solid in order , this and treatment process right past for It is necessary .

Some drivers the patient own income or of existence source as they see , this and deontology principles Especially in dentistry such in cases moral problems appearance to be possible . Home attention every always human to the factor focus necessary .

All Medicine in the fields doctor's professional duty to do is to do general medical preparation one is part of the modern prevention , diagnostics , treatment and rehabilitation methods to know , internal and external culture to the rules strict compliance to do doctor's medical ethics and culture organization will reach .

Therefore , medical deontology just " doctor " not " manners " , but ethical , professional and organizational principles is a system .

To the dentist patients every kind aged , social in case and different psychological in cases appeal They do . Therefore , doctor dentistry patient with in conversation not only healer , maybe psychological , cultural and social impact shows .

Biomedical research take on the way law and to the standards action If not done , this action is considered negligence. immorality or even crime as is evaluated and Uzbekistan Republic to the laws according to to responsibility is being weighed .

President Sh. M. Mirziyoyev “ Uzbekistan In the Republic primary medical - sanitary help institutions to the activity new mechanisms current to grow and health storage system reform to do measures "about" Decree , Medicine system further effective to do the necessity emphasized .

Uzbekistan health storage system reform to do in the process modern primary medical help system formation and management new mechanisms current to grow works done is being increased.

Conclusion

Modern dentist doctor upbringing ethics and deontology without concepts possible not . Presidential Decree No. PP -3894 of August 2, 2018 " Uzbekistan " in the resolution In the Republic health storage system innovative management model current to grow measures "About " is called . This to the decision according to health storage in the system boot behavior increase necessity emphasized .

Doctor patient overconfidence has , because patient to him/her own health and his life believes This belief not only profession attractiveness , but also indicates responsibility .

That's why for doctor in itself knowledge and your feeling harmony , society in front of moral responsibility upbringing necessary . Dentist not only educated expert , maybe solid religious, moral to principles loyal , creative thinking person must be .
