

## PROBLEMS OF WORD RESEARCH OF THE AGRARIAN SPHERE IN UZBEK LINGUISTICS

Islamova Shahnoza

TDAU Teacher of the Department  
of Uzbek Language and Literature

### Abstract

A number of problems in the field of agriculture are waiting for their solution. In particular, the colors of the soil have a number of confusions. "Sur" rang is also "Boz" color is also meaningless (synonymous) words. It can be seen from this that Boz soil (light gray), sur soil (dark gray). Blue is also not used in relation to the soil, even if it denotes gray, but it also poses various problems, as it denotes 3 different colors. The solution was for US soil scientists to develop a quantitative scale of soil color (quality) and define it by means of numbers.

**Keywords** and vocabulary: chalk, sur, Blue, Soil Scientist, soil colors, term, dictionary.

### Introduction

Due to the lack of extensive work by linguistic scientists in the field of Agriculture, many questions have been waiting for their own answer. The synonym is not only a preexisting term in linguistics, but also in biology (taxonomic or nomenclature synonyms), Botany (homotypic or heterotypic synonyms), Zoology, bacteriology (objective or subjective synonyms), and pharmacy (alternative synonyms or analogue), and is used to refer to several names of a particular plant, animal, or medicinal product given in different periods and different languages. (4) the above Science Network is inextricably linked with agriculture problems of synonymy of field terms in Uzbek linguistics doctor of Agricultural Sciences, professor O.K. It is explained by Komilov as follows.

"In the process of working the dictionaries, it became known that the terms Soil Science and agrochemistry in the Uzbek language are very poor." (2, 3-4) - said and as well as focusing on confusing translations about bad soil and Sur brown soil. As proof of this point, we can see the following explanation in O'TIL (5 vols).

Bull II is a blue-prone white color (mainly about noun format). Bull noun. Bo'z bo'ri. Bo'z to'rg'ay. Bo'z qarchig'ay. Bo'z eshak. Bo'z tuya. O'ktham was a young boy on horseback. Oybek, the breeze from the Golden Valley. (1, 399)

Boz soil is undeveloped Boz land, uncultivated soil, or gray soil. ♦ The level of carbonation in Central Asian boztuprocks is stronger compared to others. M. Bahodirov, practical training in Soil Science. (1, 399)

SUR III (f-red, gold, reddish) 1. the horse is dark gray, with dark tongues. ♦

The Unar place of the Tulips will be built, and the dazzling type of Karakol will be sur. Ya, Victim. ♦ On the door staircase, a man was seen wearing a sur cap and pinning the bar of his red lining chakmon to his silver belt. "Morning Star".

2. sft. Dark gray in color; surrang. Sur karakul skin. Finished each fleeting one line to the Sur wall of the booth. Mirtemir, "Works" (1, 590)

Blue.1. Clear sky-colored; blue, rusty. Blue eye. Blue paint.

◆ Waving little-little flags in our hands, blue in the sky, red ball light flying plays. I. Muslim.  
2. Gray in color, gray. Blue Wolf. Blue pigeon. The whip, with a blue horse, led the straw toy and went to the river. H. Ghulam,"Torch".

3. s. t. Green, vegetable. Blue Grass. In front of me, wobbling Blue Leaves every moment, I sympathize. (1, 449-450) " references from these dictionaries indicate that there are no strict quantitative indicators of colors in Uzbek as well as in Russian. Therefore, it is necessary if US soil scientists in the following years have developed a quantitative scale of soil color (format) and implemented its designation by means of numbers. This experiment is worthy of studying "Sur" color and "Boz" color also meaningless (synonymous) words. (3, 3-4) it can be seen from Boz soil (light gray), sur soil (dark gray). Blue color is also not used in relation to the soil, even if it denotes Gray. But it also causes different confusion as it denotes 3 different colors. First of all, it has a form of survival: Blue (Sky)-Blue (Grass), this happens. For the Uzbek language to face the world, this synonymy is destined to cause harm, confusion, rather than benefit, due to which it is difficult to achieve uniformity in explanatory dictionaries and translation dictionaries. We understand language semantics by ourselves, but for representatives of other languages this situation is problematic. Therefore, the most correct solution is to develop a quantitative scale of soil color (format) and define it by means of numbers.

As the main norm of living in the world is thought, in our country, unprecedented fundamental reforms are being implemented. The transition to market relations caused the development of culture, science, industry, technology, agriculture to also receive updates in the lexicon of the Uzbek language. In a process in which the flow of new words and terms is accelerating, words and Terms cannot sum up all of them, even if the wood fork is 5-Tom. It is clear that the compilation of an Explanatory Dictionary of agricultural terms will be a brochure that will ensure the prosperity of the industry.

In this regard, the rapid development of vocabulary work leads to positive results. In particular, in the Explanatory Dictionary of the Uzbek language, theoretical – applied research on the assignment of terms for the field, especially the field that regulates the life of society-the terms for jurisprudence, is a significant reason not only for linguistics, but also for the life of society. (2, 20) in particular, in the Explanatory Dictionary of the Uzbek language, the terms of the field especially in the theoretical studies of winter farm terms linguists together with the life of society, The Specialists of the field should be the true abusers of the granoms. Because Uzbekistan is an agrarian country, it still needs a real guide for educated young people who open the doors of opportunities.
