

## THE PERSPECTIVES OF ECONOMIC DEVELOPMENT IN NEW UZBEKISTAN

Ubaydullaeva Oydiyoy Xabibullayevna

Tashkent Transport Technical School

Teacher of the Department of Accounting and Business

### Abstract

The article examines key aspects and trends in the development of the economy of Uzbekistan in the context of reforms being carried out within the framework of the "New Uzbekistan" concept. The main focus is on economic transformations aimed at diversifying industries, supporting entrepreneurship, attracting investments and improving the well-being of the population. Strategic directions of economic policy, including the role of innovation, digitalization and international cooperation, are analyzed. The work provides a theoretical overview of the prospects for sustainable economic growth and the tasks facing the country's economy in the coming years.

**Keywords:** Economy, New Uzbekistan, reforms, investments, diversification, innovation, digitalization, sustainable growth.

### ПЕРСПЕКТИВЫ РАЗВИТИЯ ЭКОНОМИКИ В НОВОМ УЗБЕКИСТАНЕ

### Аннотация:

В статье рассматриваются ключевые аспекты и тенденции развития экономики Узбекистана в условиях реформ, проводимых в рамках концепции «Новый Узбекистан». Основное внимание уделяется экономическим преобразованиям, направленным на диверсификацию отраслей, поддержку предпринимательства, привлечение инвестиций и повышение благосостояния населения. Анализируются стратегические направления экономической политики, включая роль инноваций, цифровизации и международного сотрудничества. Работа предоставляет теоретический взгляд на перспективы устойчивого экономического роста и задачи, стоящие перед экономикой страны в ближайшие годы.

**Ключевые слова:** Экономика, Новый Узбекистан, реформы, инвестиции, диверсификация, инновации, цифровизация, устойчивый рост.

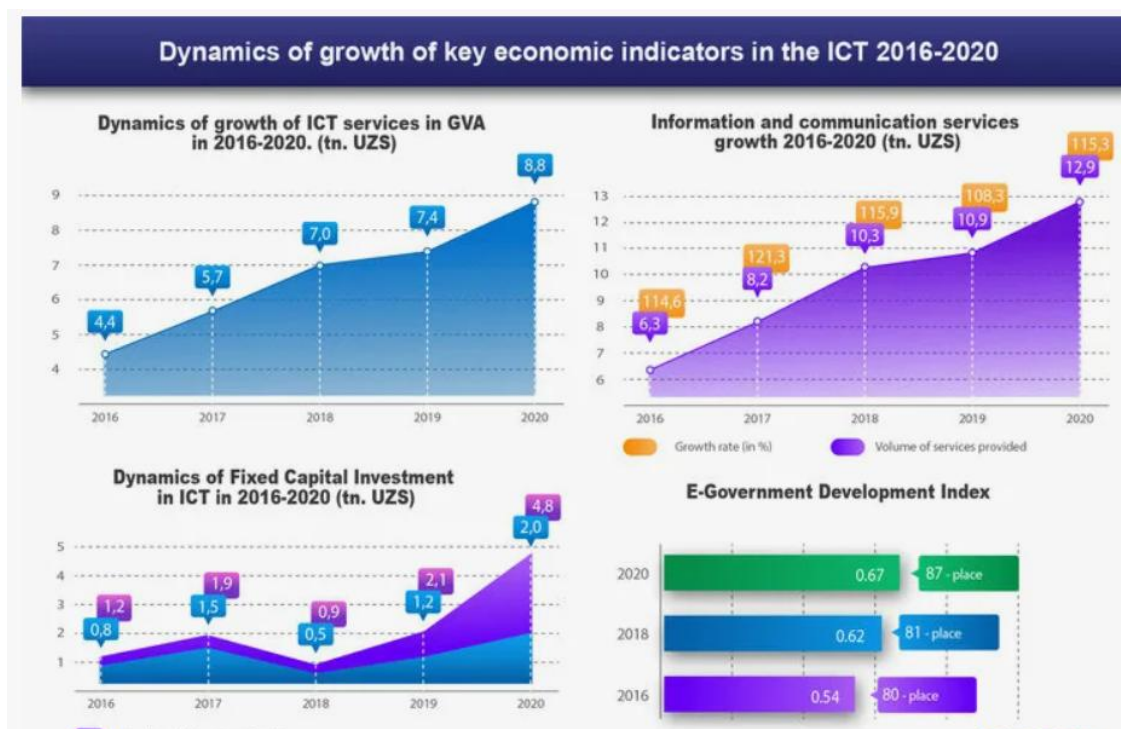

### Introduction

In the face of global challenges and changes, many countries are reviewing their approaches to economic development. Uzbekistan, with its rich cultural and economic heritage, is at the center of significant transformations due to the transition to a more open and competitive economic model. The concept of "New Uzbekistan" reflects the desire of the country's leadership to

implement deep reforms aimed at improving living standards, developing the economy and strengthening its positions in the international arena.

One of the key areas of economic policy in New Uzbekistan is the diversification of the economy. Traditional dependence on the export of raw materials is gradually giving way to the development of industry, agriculture and technology. This is accompanied by active support for small and medium-sized enterprises, which are an important driver of economic growth and job creation. At the same time, the role of the private sector is increasing, which is becoming the main source of innovation and efficient use of resources.

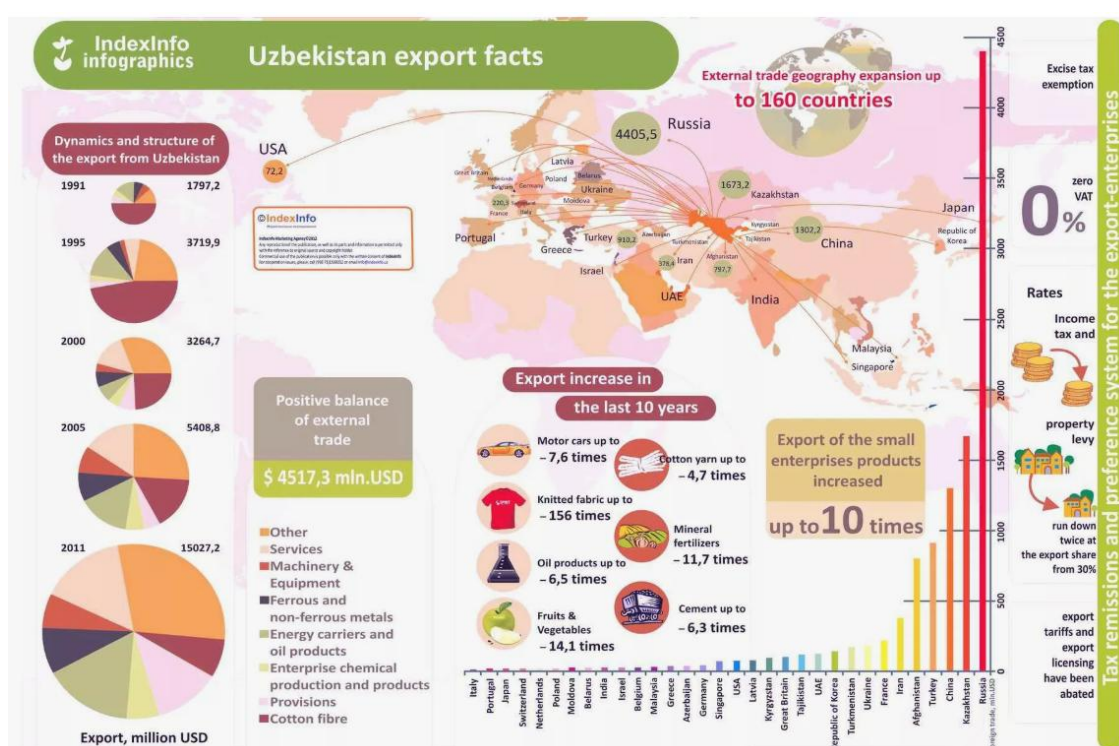

Attracting foreign investment and strengthening international cooperation play an important role in the transformation of the economy. Creating a favorable investment climate, including improving the regulatory framework, reducing administrative barriers and ensuring transparency, has become one of the main tasks of the reforms. These measures contribute to Uzbekistan's integration into the global economy and enhance its competitiveness. Active participation in international organizations and agreements helps strengthen economic ties, which in turn opens up access to new technologies, markets and resources.

Particular attention is paid to innovation and digitalization as important factors of sustainable growth. The introduction of new technologies and management methods allows for increased productivity, reduced costs, and the development of new economic sectors. An important step in this direction is the modernization of infrastructure, including transport, energy and information components, which creates the basis for long-term development. One example is the introduction of digital technologies in the field of public administration, which makes it possible to increase the transparency of processes and improve the quality of services provided. However, Uzbekistan faces a number of challenges on the way to achieving its goals. Among them are the need to improve the qualifications of the workforce, improve the education system,

solve social problems and fight against corruption. Sustainable economic growth requires a comprehensive approach that includes both macroeconomic and institutional reforms. Solving these problems requires close interaction between government agencies, the private sector, and civil society.

This work is aimed at analyzing the current achievements and prospects for the development of Uzbekistan's economy. A theoretical study of the processes taking place in the country will help to better understand what steps are necessary to successfully solve the tasks set and achieve sustainable development. Particular attention is paid to studying long-term trends such as the transition to a "green" economy, the use of renewable energy sources, and the development of the knowledge economy. These directions are considered as key factors contributing to the creation of a solid foundation for future generations.

In the context of globalization, Uzbekistan is focusing on implementing practices that allow for harmonious integration of economic development with environmental protection. Therefore, the strategy of sustainable growth becomes the cornerstone of national development aimed at meeting the needs of both current and future generations.

Economic development is a key priority of Uzbekistan's modern policy, and within the framework of the "New Uzbekistan" concept, significant efforts are being made to modernize all sectors of the economy. The most important feature of the current stage is the transition to a multidisciplinary model aimed at reducing dependence on raw materials and expanding opportunities for sustainable growth. These changes include the introduction of new technologies, the improvement of the business environment and the creation of conditions for attracting investments.

Diversification of the industrial sector is a priority direction of economic transformations. Previously, the economy of Uzbekistan focused on the export of cotton and other raw materials, but in recent years, there has been a rapid development of manufacturing, light and heavy industries, as well as agriculture. One of the main tasks is to create a value chain within the country, which allows not only to strengthen the domestic market, but also to increase the competitiveness of national goods on the international stage. Support for domestic producers is provided through a system of subsidies, tax incentives and state grants.

Significant attention is paid to the development of entrepreneurship, especially small and medium-sized businesses. This category occupies a central place in economic growth strategies, as it ensures employment and stimulates innovation. Creating a favorable climate for entrepreneurs includes simplifying administrative procedures, digitizing public services, and providing access to credit resources. Such measures will significantly increase business efficiency and strengthen Uzbekistan's position in international business activity rankings.

Attracting foreign investment is an integral part of successful development. To this end, measures are being implemented aimed at increasing the transparency of state institutions, reducing the level of bureaucracy and improving the regulatory framework. Uzbekistan's active integration into the global economy plays an important role, which is realized through participation in international organizations, free trade agreements and investment forums. Direct foreign investments not only contribute to the development of infrastructure, but also stimulate the transfer of technologies, knowledge and experience necessary for the modernization of domestic enterprises.

Innovations and digitalization are the most important tools of economic transformation. The development of digital technologies affects all spheres - from agriculture to logistics and finance. Innovative approaches are used to optimize production processes, reduce costs, and improve the quality of goods and services. The introduction of a digital economy requires the creation of appropriate infrastructure, training of personnel and legislative support, which is also part of the current development strategy.

Economic development is impossible without sustainable use of natural resources and compliance with environmental standards. Uzbekistan is actively promoting the concept of a "green" economy aimed at using renewable energy sources, reducing the carbon footprint and protecting the environment. This includes the construction of solar and wind power plants, modernization of water supply systems and waste reduction. Such measures are aimed at ensuring the long-term sustainability of the economic system and preserving the natural heritage for future generations.

At the same time, social tasks related to improving the quality of life of the population are being addressed. Income growth, education modernization, and access to medical services play a key role in shaping human capital, which is the foundation of any economic success. The state is actively investing in the development of regions, which contributes to the reduction of the socio-economic gap between the city and rural areas.

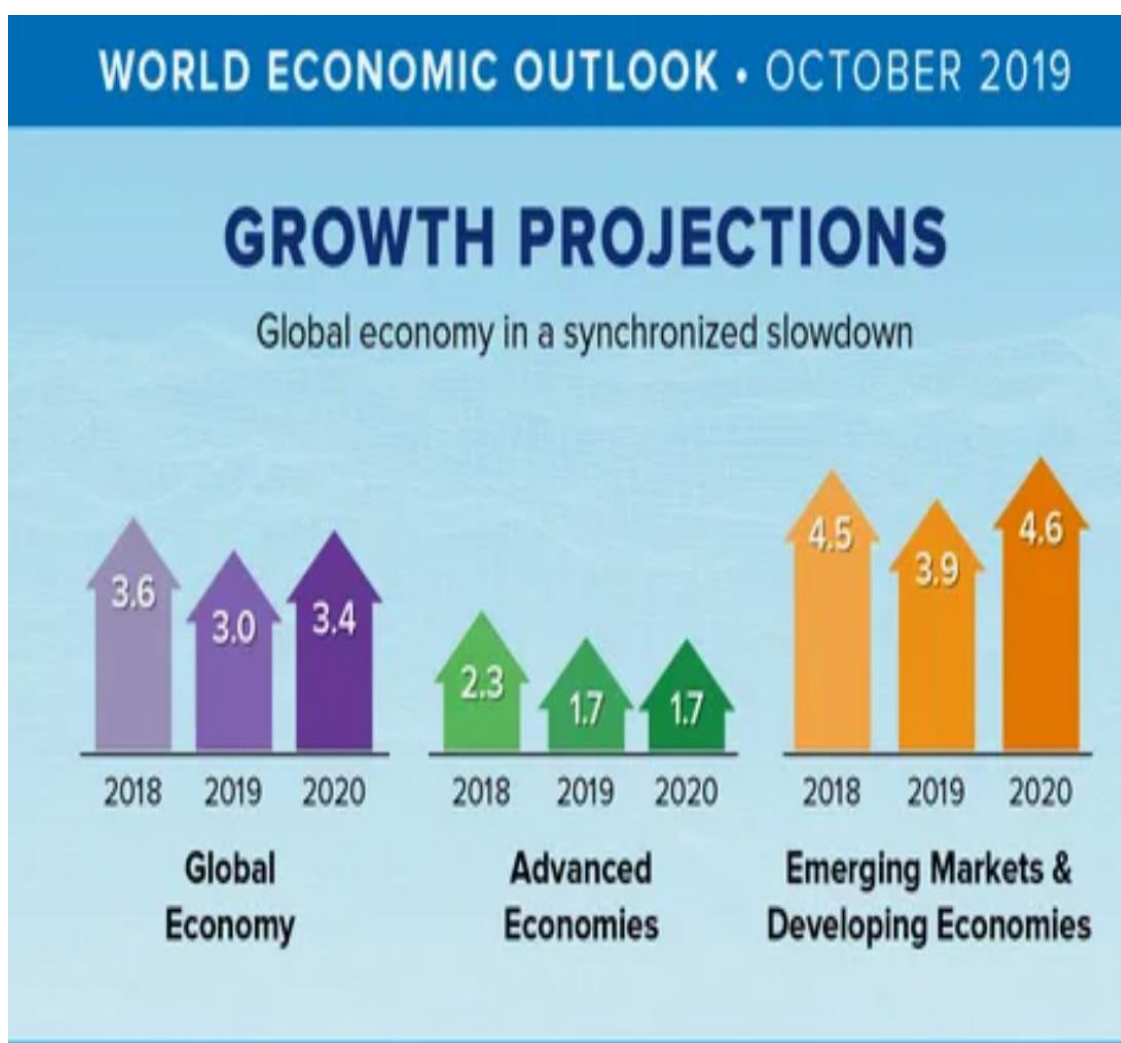

Despite significant progress, Uzbekistan's economy faces certain challenges. These include the need to increase labor productivity, reduce the level of shadow economy, and develop transport infrastructure. However, a comprehensive approach to reforms, combining elements of

economic, social, and environmental policy, allows for the achievement of strategic goals defined within the framework of the "New Uzbekistan" concept.

#### Conclusion

The economic development of Uzbekistan within the framework of the "New Uzbekistan" concept is a complex and multifaceted process, including the modernization of all key sectors of the economy, the introduction of innovative technologies, the development of entrepreneurship and the improvement of the quality of life of the population. These tasks require a comprehensive approach to reforms, combining economic, social, and environmental aspects. The outcome of reforms and economic development strategies play a crucial role in shaping the foundations of sustainable growth.

One of the key aspects of economic development is the need to diversify the structure of the economy. Uzbekistan seeks to reduce dependence on traditional export industries, such as agriculture and mineral extraction, with a focus on developing industry, services, and high-tech sectors. This will strengthen the domestic market, increase the competitiveness of products and integrate the country into the global economy. The implementation of these plans requires significant investments and concerted efforts from all participants in the economic process.

Attracting foreign investment plays a central role in the process of modernizing the economy. Thanks to the creation of favorable conditions for investors, Uzbekistan is able to attract capital, which contributes to the development of infrastructure, the creation of new jobs and the introduction of advanced technologies. These changes are accompanied by the strengthening of the institutional framework aimed at ensuring the transparency and predictability of economic policy. However, attracting investments is also accompanied by challenges such as ensuring the protection of foreign investors' rights, combating corruption, and minimizing bureaucratic barriers.

Innovations and digitalization of the economy remain an important direction for achieving sustainable growth. The introduction of modern technologies in production, transportation and other industries increases resource efficiency and ensures higher quality of products and services. Particular attention is paid to training personnel who possess the necessary skills to work in the digital economy. It is important to note that successful implementation of innovations is possible only with the presence of developed infrastructure, including high-speed Internet, modern communication systems and logistics chains.

Environmental sustainability and the transition to a "green" economy have become an important element of Uzbekistan's economic policy. The country is actively developing projects in the field of using renewable energy sources, modernizing water resources and waste management. This not only reduces environmental damage, but also creates new jobs in promising sectors of the economy. Investing in environmental sustainability is a long-term strategy that contributes to the preservation of natural resources for future generations.

The social aspects of reforms, including raising the standard of living of the population, improving the quality of education and healthcare, remain the central element of development. The state policy is aimed at reducing social inequality, supporting low-income segments of the population and stimulating economic activity in remote areas. These measures ensure a more even distribution of goods and contribute to strengthening social stability.

However, there are challenges on the way to achieving the set goals, which require significant efforts. Among them are the need to increase labor productivity, improve the management system and develop entrepreneurship. It is also important to consider global factors such as fluctuations in global raw material prices, changing climatic conditions, and instability in international markets. Uzbekistan will have to adapt flexibly to these changes in order to maintain positive development dynamics.

Uzbekistan's economic development prospects are based on strategic initiatives and long-term plans, which include integration into international economic structures, regional cooperation development, and strengthening national competitiveness. It is important to note that the successful implementation of these plans is possible only with the active participation of all parties - the state, the private sector, the scientific community and civil society.

In conclusion, it can be said that Uzbekistan is on the path to building a new economic model that combines innovation, sustainability, and social orientation. The concept of "New Uzbekistan" sets clear guidelines for reforms aimed at creating a strong, competitive and fair economy. Successful implementation of the set goals will require time, resources and coordinated actions, but already today, positive results are visible, which confirm the correctness of the chosen course.
