### Abstract:

This article focuses on ways to develop and strengthen national spiritual immunity in the hearts of the younger generation today and to improve their innovative activity. It outlines ways to educate well-off young people and address a number of problems that hinder the development of our society.

**Keywords:** social development, innovative knowledge, intellectual culture, national spiritual immunity, society intellect.

### INTRODUCTION

(Matthew 24:14; 28:19, 20) Jehovah's Witnesses would be pleased to discuss these answers with you. We believe that we need to accelerate the reforms of healthy thinking needed to further intensify within this requirement and, through this, first and foremost develop healthy needs in ourselves. The fact is that any development arises from dissatisfaction with the current state. That is, the satisfaction with the existing situation creates stagnation. The formation of a new need in a person is a source of progress. (Matthew 24:14; 28:19, 20) In today's developing world, intelligent, creatively capable, sought-after, and independent thinkers are a great power that drives the scientific and technological development of society, and in the future they will need to integrate (develop cooperation) all sectors with the world community. From this point of view, the approach to the problem is intended to find talented young people, instruct them wisely, and put them in a particular direction. Because it is a modern time to find individual characteristics, internal strength, opening up hidden opportunities, improving, developing, impacting factors and tools, namely, researching in accordance with the needs and development of society, and, in a nutshell, improving the innovative activity of young people.

Of course, we are delighted with the changes that are taking place in the field of education in Uzbekistan, the activities of various foundations, and the selection of talents. But that's not enough yet. After all, it is true that the land needs educated and educated people in those departments, not young people who have graduated from any educational institution. It is truly important to acquire knowledge, but independent thinking and unconventional thinking can lead to further development and social progress.

The following factors will have practical implications for the development and strengthening of national and spiritual immunity.

First, the development and effective use of national intellectual potential. This involves developing education and national upbringing, transforming national traditions, traditions and values into an integral part of the youth world, ensuring that young people feel that their nation's

values are rich, beautiful, and modern in all respects, no matter how high they are, and that they are viewed as the main source of enrichment of their spirituality. The Education Act and the National Literature Programme will play an important role in the implementation of such goals. Second, a new model of education will lead to the formation of an independent thinker in society. We will have the opportunity to educate people who understand their dignity, whose will is strong, whose faith is whole, and who have a clear purpose in life. Thereafter, intelligent living becomes the main criterion for society's life. In our opinion, an important feature of society's intellect is that this layer individually organizes, develops and fills itself. That is, intellect itself develops all the necessary tools and ways for its work and ensures that it is improved in accordance with its time.

(Matthew 24:14; 28:19, 20) During today's global development, people's social minds and worldviews are constantly being updated, and its edges are expanding. (Matthew 24:14; 28:19, 20) Jehovah's Witnesses would be pleased to discuss these answers with you. As a result of these processes, tools are emerging that promote the intellectual culture of individuals and society. These include, for example, scientific, technological, literature, and saga, as well as positive developments in teaching methodology.

(Matthew 24:14; 28:19, 20) Jehovah's Witnesses would be pleased to discuss these answers with you. To assist individuals desiring to benefit the worldwide work of Jehovah's Witnesses through some form of charitable giving, a brochure entitled Charitable Planning to Benefit Worldwide has been prepared. Therefore, in this regard, they must first address a number of problems that hinder the development of our society in order to educate well-educated young people like them. First of all, the methods and methods of ending the old age from the minds and minds of the older generation to a certain extent, paying more attention to the moral and ethical upbringing of young people, changing their spirituality, attitudes and attitudes toward society, bringing up active young people who advocate important changes in the transition to civil society, and addressing the sarcophagus of the old, governing system by forming a new political and economic thinking in the public mind, Competition in the education system in accordance with national educational standards in the development and reform of their tools, the weaknesses imposed by the government in ensuring the implementation of laws, regulations and regulations, the elimination of declarative forms or deviations, the promotion of society's legal minds, the elimination of existing shortcomings in this area, and the development of modern science and technology the environment needs to be formed. At the same time, it is important to create innovative networks in the scientific and technological tool that allow us to produce competitive products in the world market needed for our country, and to provide a framework for young people who promote scientific development to be aware of the experience of developed countries, and to improve social infrastructure and maintenance. It is necessary to overcome existing shortcomings in having to bring national ideology closer to the spirituality of the people, to prevent the field of science from becoming dependent on other areas, to prevent existing obstacles facing employees serving in the field of science: paperwork, orders, harassment, adequate attention to the development of science, freedom, and so on. It is known that all knowledge and technology will change and improve over time. (Matthew 24:14; 28:19, 20) Jehovah's Witnesses would be pleased to discuss these answers with you. Therefore, we think that we should also develop and develop the intellectual capacity of individuals and society based

on the demands of today's world labour market. In this regard, we will also need to improve all factors that enhance intellectual capacity in accordance with these requirements.

Generally speaking, a wide range of clearly directed measures are being taken in our country to raise a healthy and perfect generation, to realize the creative and intellectual-innovative well-being of young people, and to create the necessary conditions and opportunities for bringing up our country's young men and women as well-developed individuals who fully meet the demands of the 21st century.

In a nutshell, all of the above factors, considered as tools for improving and improving the intellectual well-being of young people in improving their innovative activity, are always in change and improvement, all of which are based on the inheritance of society's intellect and prosper.
