Keywords: education, educational philosophy, creativity, creative thinking, science, methodological consciousness, object, mind, innovation, constructivism, worldview.

INTRODUCTION

The main goal of the state policy in the field of education is to increase the convenience and quality of education that meets the needs of society and each of its citizens. In order to achieve this goal, individualization of education is important and it can be effectively achieved in modern conditions using electronic education, including distance education ¹technologies . The form of distance education is a form of education experienced by many developed countries, especially during the corona virus pandemic, it ensured the continuous education process of pupils and students . In the experience of countries such as Great Britain, Finland, Japan, the USA, a number of educational platforms have been created in order to improve the level of knowledge of students and to meet their need for distance learning . Individual education has several advantages. First of all, it is necessary for the student to freely express his thoughts It has a number of advantages, such as easy finding of literature, the educational process that takes into account the capabilities of the student , the correct identification of the student's abilities and motivation .

Currently, the developed countries of the world see mental work as the basis of their development. In such a situation, scientists are on the way to support any intellectual knowledge of the team of talented people. Through this, they are getting a set of knowledge capable of changing the fate of mankind. Because they deeply understand that the future of humanity depends on the results of these intellects . For this reason , in order to achieve "the independent thinking, high intellectual and spiritual potential of our youth, and the development and happiness of their peers on a world scale in any field" ²and implementation of measures for their development" ³is given special importance.

The goal of the existing educational systems in the world is to prepare competitive personnel with high spiritual and scientific knowledge. The main goal of the work being done in this regard in our country is to provide education and training to young people who have combined rational and religious knowledge. President Sh.Mirziyoev's opinion: "We consider it our first duty to improve the activities of all parts of the education and training system based on today's requirements"⁴ clarify our views and goals in this regard.

People with intellectual potential are often understood as educated people. That is, intellectuality is considered as a concept used in relation to the social stratum or group of people who are smart, educated, intellectually mature, intellectually developed population, the main work order of which is directed to intellectual-creative work. According to I.B. Siddikov : "The only objective approach to clarifying the content and essence of the concept of intellectual culture is its scientific research, therefore, when doing this, each stage ends with a detailed description, but there are few definitions reflecting its general essence in scientific and philosophical literature. The intellectual culture of a person is the ability to determine the goals and tasks of his noseological activity based on his intellectual abilities, the skills of creating intellectual values, the ability to work with sources of knowledge and informational and technical tools ⁵.

It is important that the educational system is able to perform tasks such as formation and development of students' intelligence. In order for a certain person to have the potential of intellectual thinking, he must go through the stage of socialization , that is, he must actively participate in the system of social relations from a young age. The intelligence given to a person indicates his creativity. From this point of view, mind control also has certain restraints. As long as people's rational thinking is not directed in a certain direction, it is evident that it does not bring any benefit to the life of the society. For this reason, it is desirable to form the intellectual culture of society members. It should be emphasized that property gives a person the opportunity to ensure his independence, intellectual culture ensures that he can use his mental activity properly.

Education system modernization _ _ to be done, tan taken the world experiences application verb measures to see today acceptance being done education programs first galdagi purpose and duties is one Education processes high innovative technologies current do it in the field competitive personnel preparation today do is required.

Education in the institution, optimization of educational processes, educational system is an integral part of modernization.

Our country ra h bar Sh . Mirziyoev by state and society Modernization _ _ according to placed tasks population in his mind priority doer values about imaginations and value criteria system on the surface real thought conduct and each bilaterally learning, citizens, especially young people values collective research to reach demand is enough. This in the country not only society development spiritual relationships to determine, but Uzbekistan's - cultural modernization or transformation in the direction of going or to the absence precision to input too possibility gives

modernization of doing structural part organize is enough.

the educational system of Uzbekistan with high technologies, training qualified personnel, re-developing their material and technical base in accordance with world standards is one of the urgent issues on today's agenda. In this regard, normative legal documents, laws and decrees aimed at the development of the education system in Uzbekistan were adopted, which include the following: In the concept of development of the public education system of the Republic of Uzbekistan until 2030, "improving the teaching methodology, step-by-step implementation of the processes of individualization in the educational process ; introduction of ⁷modern information and communication technologies and innovation projects in the field of public education" . At the root of such work is the competitive training of emerging personnel, their skills and qualifications. The main goal of the state policy in the field of education is to increase the convenience and quality of education that meets the needs of society and each of its citizens. In order to achieve this goal, individualization of education is important and it can be effectively achieved in modern conditions using electronic education, including distance education ⁸technologies . The form of distance education is a form of education experienced by many developed countries, especially during the corona virus pandemic, it ensured the continuous education process of pupils and students . In the experience of countries such as Great Britain, Finland, Japan, the USA, a number of educational platforms have been created in order to improve the level of knowledge of students and to meet their need for distance learning . Individual education has several advantages. First of all, it is necessary for the student to freely express his thoughts It has a number of advantages, such as easy finding of literature, the educational process that takes into account the capabilities of the student, the correct identification of the student's abilities and motivation .

Today, in the educational system of leading foreign countries , serious attention is being paid to the formation of creativity in pupils and students . it is necessary to create an environment of healthy moral competition among teachers and students by teaching them critical thinking and analysis guidelines . After all , the creation of a competitive atmosphere among students is largely related to their creativity , as we have mentioned above , the like-minded team is always behind. It is an important task for our society to form a team of people who think differently, approach every situation with an optimistic spirit, and have a developed creative way of thinking .

In general, at the current stage of scientific and technical development, more and more demands are placed on the development of human mental abilities. In such conditions, the study of the formation and working mechanisms of creative thinking, the conditions that help to increase creative potential, remains important and relevant.

It is important to study creative thinking, which is understood as the process of the most effective functioning of all the components of the human mental system, based on various fields of philosophy and philosophy.
