

THE ROLE OF ENGLISH IN UTILIZING THE CAPABILITIES OF MODERN TEXT EDITORS

Nematulla Abdukarimovich Gulbaev

Associate Professor of the Tashkent Institute of Economics and Pedagogy

Mohira Jumaqulovna Karimova

Teacher of the Tashkent State Agrarian University

Abstract:

The article presents the possibilities of modern text editors, and the role of the English language in its effective use is given as a recommendation based on the experience of the authors.

Keywords: English language learning, education quality, modern technologies, word processors, text editors, communicative culture, information technologies, foreign language acquisition.

ZAMONAVIY MATN MUXARRIRLARI IMKONIYATLARIDAN FOYDALANISHDA INGLIZ TILINING O'RNI

Gulbaev Ne'matulla Abdukarimovich

Toshkent iqtisodiyot va pedagogika instituti dotsenti

Karimova Mohira Jumaqulovna

Тошкент давлат аграр университети ўқитувчиси

Annotatsiya:

Maqolada zamonaviy matn muxarrirlari imkoniyatlari berilgan bo'lib, undan samarali foydalanishda ingliz tilining o'rni mualliflarning tajribasi asosida tavsiya sifatida berilgan.

Kalit so'zlar: ingliz tilini o'rganish, ta'lim sifati, zamonaviy texnologiyalar, matn protsessorlari, matn muharrirlari, kommunikativ madaniyat, axborot texnologiyalari, chet tilini o'zlashtirish.

Introduction

Nowadays, the use of English language capabilities in order to improve the quality of education has become one of the most widespread methodological tools. Today, it is not wrong to say that the introduction of English language capabilities in education has facilitated the educational process. After our independence, the attention to the quality of education increased further in accordance with the "National Program for Personnel Training". In it, special courses were organized to improve the knowledge and skills of teachers in working with students and students. These courses mainly provided opportunities for the use of computer simulation models in teaching and the widespread use of modern technological devices in English education. In recent years, the use of new information technologies in teaching foreign languages has become a matter of great importance. The main goal of teaching English is to learn practical skills in

English, to form and develop students' communicative culture. Learning English vocabulary is of particular importance. This includes not only remembering and pronouncing words correctly, but also knowing where and how to use them. New technologies have created many resources for students to actively and independently learn foreign words in practice. In particular, language rooms were previously used for learning English, but computer laboratories are now operating instead.

An editor (Latin - arranged) is a software system that works with computer objects (text, tables, graphics, programs).

The group of programs that prepare text documents is mainly divided into two: text editors and word processors.

Text editors are programs that prepare text files without using formatting elements. Formatting elements are understood as the fact that parts of the text are not separated by different fonts, etc. Such editors are mainly used to create text for computer programs.

Word processors are programs that allow you to format text, place graphics and other objects in a document.

Some word processors are called WYSIWYG - editors. This means What You See Is What You Get - what you see is what you get. In other words, the way you see a document on a computer screen is the same way you see it on paper when you print it. An example of such editors is Word.

Text elements

Text consists of a set of characters represented by a certain encoding (KOI, UNICODE).

A character is any letter, number, punctuation mark, arithmetic operator, etc. entered using the keyboard and displayed on the monitor screen.

A word consists of any sequence of characters separated by spaces or punctuation marks on both sides.

A line is a sequence of characters that make up each line of a page.

Paragraph — The sequence of characters that is left until the Enter key is pressed.

Section — Separate text into separate sections using the Break command on the Insert tab.

Text editor capabilities

Almost all text editors help solve the following problems (Figure 1):

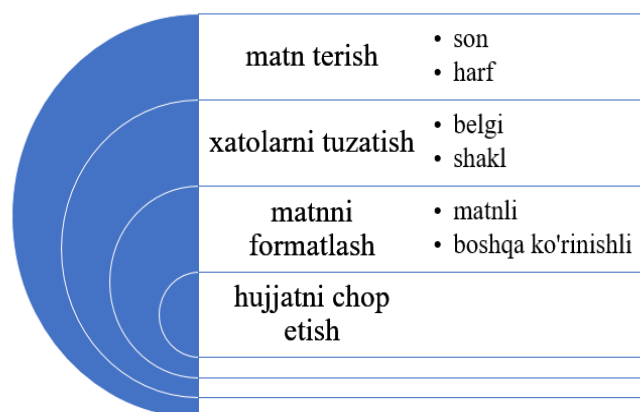

Figure 1. Text editor capabilities

All text editors perform the following functions:

- Moving the cursor,
- Working with the modes of writing characters over or between text,
- Working with a selected part of the text,
- Searching for words in the text and replacing them if necessary,
- Editor's reference book - a brief help.

There are several types of text editors. Some work under the MS-DOS operating system, others under the Windows operating system. Examples of text editors running under the MS-DOS operating system include programs such as LATES, FOTON, PE2RUS, QEDIT, LEXICON, WD. Among the text editors running under the Windows operating system, programs such as WordPad, Microsoft Word, Works can be cited.

Text editors can be single-window and multi-window. Single-window text editors can work with only one file at a time. When you open another file, the previous one is closed. Multi-window text editors can work with several files at the same time. This provides the user with a number of conveniences, namely, the ability to use text from one file in another file, and the ability to use data from several files at the same time.

When working with text in Windows, the text is printed on paper in the same way as it appears on the display.

First, let's understand the specific features of working with text in the Windows environment.

You can use the space or Tab keys to move the cursor to a certain place.

When a line is full, the cursor automatically moves to a new line. Therefore, the ENTER key is pressed only after the end of the paragraph (not after each line).

Punctuation marks (period, comma, colon, exclamation point, question mark) cannot be preceded by a space, only by one space after them. Otherwise, the next line may start with a punctuation mark.

10 reasons to learn English:

1. English is a world language

English is the most widely spoken language in the world.

2. Learning English helps you get a job

English is used in science, aviation, computers, diplomacy and tourism.

3. Learning English helps you meet new people

English is the official language of 53 countries.

4. Most scientific papers are written in English

In the past century, scientific papers written in English have begun to outnumber those written in the researcher's native language.

5. English is the language of the media industry

Because Hollywood is so popular in the global media, many movies, TV shows and popular songs have been written in English.

6. English is the language of the Internet.

More than half of the content on the Internet is written in English.

7. It is much easier to travel with good English

Imagine, you are a Spanish citizen on vacation in Thailand, your hotel receptionist may not be able to answer your question in Spanish, but he or she can answer your question in English.

8. English is one of the most important languages for business

English is one of the most important business languages, as it is the de facto language of the United States and the official language of the United Kingdom, Canada, India and South Africa.

9. You can study all over the world with English

Since English is spoken in so many countries, there are thousands of schools and universities around the world that offer programs in English.

10. English provides access to several cultures.

In conclusion, it can be said that word processors are used when not only the content of the text, but also its appearance is of great importance. Word processors have the ability to affect the appearance of the text. For example, they can insert various images and tables into the text, change the size, color and appearance of symbols, etc. Word processors are usually used in the preparation of official documents. Text prepared using a word processor is called a document. A document created using a word processor contains not only text, but also information about its appearance (font type, size, color, etc.). These are special codes that are not visible on the screen or on paper.

To summarize the above, basically all text editors are programs. The programs are written in English, so if we learn English, we will get acquainted with the original version of the program.
